JOURNAL OF CRYSTAL GROWTH

Subject index

Apparatus
– for melt growth
– – by replenishing constituents
– – – of cadmium zinc telluride 301

Cellular growth
– of copper manganese alloys 109
– of tin copper alloys 145
– of transparent alloys 117
Computer simulation
– of flow patterns in Czochralski growth 427
Constitutional supercooling
– of potassium aluminum sulphate 61
Convection 17, 133

Dendritic growth
– of copper manganese alloys 103
Device characterization
– electronic materials 343
– lasers 1, 48, 343
– photovoltaic cells 9
– quantum wells 1
Diffusional control
– of protein crystals in high gravity 459
Doping of
– silicon in indium aluminum arsenide 33
– silicon in indium gallium arsenide 26, 33

Electronic materials, see Device characterization
Epitaxy, see Thin film growth
Etching
– chemical 160, 229, 241, 293, 343
– domain 281
– photolithographic 343
Eutectic growth, of
– silicon gold 304
– tin copper alloys 145

Hydrodynamics, see Convection

Kinetics
– of growth 229, 259, 272, 318, 410, 437, 441
– of interface control 218, 318
– of nucleation 218, 410

Lasers, see Device characterization
Lasers, crystals for
– copper manganese alloys 105
– garnets 48
– lithium niobate nonlinear optical conversion 160
– second harmonic generation 281
Lysozyme 79, 97

Melt growth technique
– by Bridgman–Stockbarger method
– – of cadmium zinc telluride 204, 301
– – of silicon 41
– – of tin bismuth alloys 133
– – of transparent alloys 117
– by Czochralski method
– – of europium nickel phosphate 363
– – of gallium antimonide 290
– – of silicon 41
– – of strontium gallogermanate 452
– by floating zone method
– – of bismuth germanate 382
– – of cuprous ferrite 55
– by Kyropoulos method
– – of indium phosphide 17
– by uniaxial solidification
– – of succinonitrile 117, 145
– theory of segregation in silicon 210
Microgravity, growth under
– of bismuth germanate 382
– of lysozyme 97
– of protein crystallization 79
Morphological stability
– of growth interface 17

Nucleation
– of calcium oxalate 410
– of metal particles 395

Numbers
– Grashof 133, 427
– Hartman 133
– Peclet 133
– Rayleigh 427

Phase diagram, of
– cadmium zinc telluride 204
– lysozyme chloride 79
– sodium vanadate 314
Photovoltaic cells, see Device characterization
Precursor, for
– biological hydroxyapatite 70
Purification of
– zinc tungstate 455

Quantum wells, see Device characterization

Solid growth technique
– by polymorphic transformation
– – of diamond 308
– by reprecipitation
– – of pharmaceutical powders 403
Solution growth
– by flux method
– – of garnets 48
– – of potassium titanyl phosphate 281
– – of sodium vanadate 314
– by gel method
– – of antimony thiourea bromide monohydrate 390
– by low temperature method
– – of potassium aluminum sulphate 61
– – of potassium dihydrogen phosphate 265
Superconductivity materials, high T_c
– film
– – of BSCCO 446
Superlattices
– of lithium niobate based films 160

Thin film growth, epitaxy
– by atomic layer epitaxy
– – of rutile 259
– by liquid phase epitaxy
– – of silicon gold system 304
– by metalorganic molecular beam epitaxy
– – of indium gallium arsenide 193
– – theory of carbon doping in III–V compounds 171
– by molecular beam epitaxy
– – of aluminum gallium arsenide 1
– – of gallium arsenide 1, 326
– – of indium gallium arsenide 297
– – of 3,4,9,10-perylenetetracarboxylicdianhydride 181
– – of zinc oxide 165
– by vapor phase epitaxy
– – through metalorganic chemical vapor deposition
– – – of aluminum 437
– – – of aluminum arsenide 33
– – – of gallium aluminum arsenide 318
– – – of gallium arsenide 33, 318
– – – of gallium indium arsenide 26, 337
– – – of gallium nitride 197, 293
– – – of gallium phosphide 321
– – – of indium phosphide 321
– – – of lead zirconium titanate 374
– – – of silicon germanium 441
– – – of zinc magnesium sulphide selenide 343
– – – of zinc selenide 343
– – – of zinc sulphide selenide 343

Vapor growth technique
– by chemical transport
– – of silicon carbide 229
– by evaporation and condensation
– – of 4-aminobenzophenone 418
– – of silicon carbide 241, 351
– by hot wall epitaxy
– – of bismuth doped lead sulphide 367
– by ion beam modification method
– – of silicon carbide 218, 254

Whiskers growth
– of bismuth based 2212 superconductors 446
